Q1

Are these three separate contracts requiring separate submittals?

A1

While these are three separate contracts, one set of submittals will suffice in covering all three projects. Please include all three State Project numbers on the SF-24-102.

Q2

Can a Consultant submit as a prime and as a sub on the same contract?

A2

Yes. It is okay to submit as a prime consultant and as a sub-consultant under another prime.

Q3

Will LADOTD pay for an engineer to be in the field during the field investigation?

A3

If necessary for the project and detailed in a task order proposal, under approval DOTD will pay for a field engineer and any surveying. Any sub-consulted surveying has been treated as a direct cost with no markup. Normally, an engineer is **not** required to be in the field, but location and elevation **are** required for every boring.

Q4 and Q5

Will LADOTD pay for professional land surveying of the borehole locations and elevations?
Will ALDOTD pay for an engineer to be in the lab during extrusion and classification of the samples?

A4 and A5

If necessary for the project and detailed in a task order proposal, upon approval DOTD will pay for a lab engineer to supervise/perform the extrusion and classification of the samples. We will **not** pay an engineer to just “be” in the lab. These functions can be performed satisfactorily by a trained technician and do not normally require an engineer to handle.

Q6

Two certified PDA tested are specified, one above Master level, and one above Basic Level. This means at least one Expert level, and one Intermediate level. Is this correct?

A6

Please see Addendum No. 1.
